Description of LCA Results

- Transport Scenario Summary: Transport between countries is calculated using actual distance data, while all other transport is calculated according to the PCR scenario.
- Note on EPD Validity: The EPD may be updated or its publication discontinued if circumstances change. To confirm the latest version and validity of this EPD, please check the following URL: <https://ecoleaf-label.jp/epd>

Additional Environmental Information not related to LCA

Produced in factories certified under ISO 14001.

About the Climate Declaration

This declaration is based on LCA calculation results conducted to create an EPD in compliance with ISO 14025, specifically disclosing only the global warming potential (carbon footprint). It should be noted that indicators other than the carbon footprint may have equal or greater importance than the impact on global warming; therefore, careful attention is required in the interpretation and communication of this declaration. These figures represent a partial extract of verified data, and the declaration itself has not been verified under the SuMPO Environmental Label Program. For the ISO 14025-compliant EPD, please refer to the QR code on the right.
