

Ecoleaf Environmental Labeling Program

Sustainable Management Promotion Organization 2-1, Kaji-cho 1 chome, Chiyoda-ku, Tokyo Japan https://ecoleaf-label.jp/

Registration number : JR-AI-21028C-B

Canon Inc.

imageRUNNER ADVANCE DX C5870i (For USA)

%The Cassette Feeding Unit is excluded.

Functional unit	Registration#	JR-AI-21028C-B	
Per unit product	PCR number	PA-590000-AI-03	
	PCR name	Imaging input and/or output equipment	
System boundary	Publication date	4/28/2021	
■ final products □intermediate products	Verification date	11/6/2021	
Raw Material acquisition, Production, Distribution,	Verification method	System certification	
Use & maintenance, and End-of-Life stage	Verification#	JV-AI-21028	
	Expiration date	11/5/2026	
Main specifications of the product	PCR review was conducted by:		
I) Approval date	11/8/2019	
	PCR review panel chair	Masayuki Kanzaki	
		Sustainable Management Promotion Organization	
	Third party verifier*		
	Hiroyuki Uchida		
	Independent verification of data & declaration in accordance with ISO/TS14067		
Company Information

Carbon Footprint of Products CFP Declaration

Ecoleaf Environmental Labeling Program

Sustainable Management Promotion Organization 2-1, Kaji-cho 1 chome, Chiyoda-ku, Tokyo Japan https://ecoleaf-label.jp/

Registration number : JR-AI-21028C-B

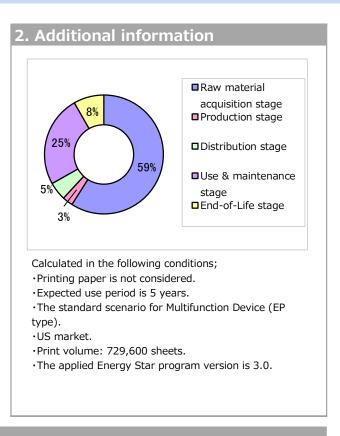

CFP quantification unit : Per unit puroduct				
	Parameter		Unit	
CFP Quantification results		1600	kg-CO₂eq	
Breakdown	Raw material acquisition stage	970	kg-CO ₂ eq	
	Production stage	47	kg-CO ₂ eq	
	Distribution stage	82	kg-CO ₂ eq	
	Use & maintenance stage	410	kg-CO ₂ eq	
	End-of-Life stage	140	kg-CO ₂ eq	
Value on CFP mark		1600	kg-CO ₂ eq	
Unit for the value on CFP mark		Per unit product		

1. Quantification results, and contents of the declaration

*Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

3. Supplementary environmental information

•Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU. •Manufactured at ISO 14001 certified factories.

4. Interpretation

•CO2 emission in Raw material acquisition stage is the largest as 59%. It is important to reduce the size and weight, and to use low environmental impact materials.

•CO2 emission in Use & maintenance stage is the second largest as 25%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during Use & maintenance stage.

•We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

5. Assumptions of secondary data used

IDEA v2.1.3, and registered data of EcoLeaf Environmental Labeling Program, JLCA data v1.07 are used.

6. Remarks

Change Date: 11/26/2021 CFP calculation results were changed to review the replacement cycle of periodic replacement parts. Reflect the points that need to be corrected as a result of the system certification inspection.1/31/2024 Changes due to additional information to match the Japanese version.

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)

- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
