## Main specifications of the product

Model name: imageRUNNER ADVANCE DX C5850i (For USA)

Specifications

Multi Functional Printer (Electrophotography)

•Print Speed: Up to 50 ipm (LTR)

Duplex printing

·Weight: approx. 104.3kg

Registration#	JR-AI-21030C-B
PCR number	PA-590000-AI-03
PCR name	Imaging input and/or output equipment
Publication date	7/16/2021
Verification date	11/6/2021
Verification method	System certification
Verification#	JV-AI-21030
<b>Expiration date</b>	11/5/2026

#### PCR review was conducted by:

Approval date	11/8/2019			
PCR review panel chair	Masayuki Kanzaki			
	Sustainable Management Promotion Organization			

### Third party verifier\*

Hiroyuki Uchida

Independent verification of data & declaration in accordance with ISO/TS14067

□inter	nal <b>■</b> exterr	nal

<sup>\*</sup>Auditor's name is stated if system certification has been performed.

# 1. Quantification results, and contents of the declaration

### CFP quantification unit: Per unit puroduct

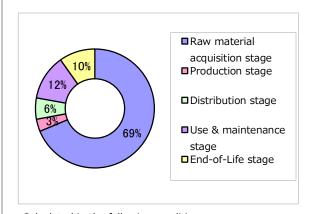

Parameter			Unit
CF	P Quantification results	1400	kg-CO₂eq
_	Raw material acquisition stage	960	kg-CO₂eq
Breakdown	Production stage	47	kg-CO₂eq
akd	Distribution stage	80	kg-CO₂eq
3re	Use & maintenance stage	170	kg-CO₂eq
_	End-of-Life stage	140	kg-CO₂eq
Value on CFP mark Unit for the value on CFP mark		1400	kg-CO₂eq
		Per unit	product

<sup>\*</sup>Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

### 3. Supplementary environmental information

- •Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.
- ·Manufactured at ISO 14001 certified factories.

# 2. Additional information

Calculated in the following conditions;

- ·Printing paper is not considered.
- Expected use period is 5 years.
- •The standard scenario for Multifunction Device (EP type).
- US market.
- ·Print volume: 374,400 sheets.
- •The applied Energy Star program version is 3.0.

## 4. Interpretation

- •CO2 emission in Raw material acquisition stage is the largest as 69%. It is important to reduce the size and weight, and to use low environmental impact materials.
- •CO2 emission in Use & maintenance stage is the second largest as 12%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during Use & maintenance stage.
- •We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

### 5. Assumptions of secondary data used

IDEA v2.1.3, and registered data of EcoLeaf Environmental Labeling Program, JLCA data v1.07 are used.

### 6. Remarks

Change Date: 11/26/2021 CFP calculation results were changed to review the replacement cycle of periodic replacement parts. Reflect the points that need to be corrected as a result of the system certification inspection.1/31/2024 Changes due to additional information to match the Japanese version.

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
