Canon Inc.

imageRUNNER ADVANCE DX 4835i Platen(For EU)

※The Cassette Feeding Unit is excluded.Platen Cover is included instead of Single Pass DADF.

Functional unit

Per unit product

System boundary

■ final products □ intermediate products
Raw Material acquisition, Production, Distribution, Use & maintenance, and End-of-Life stage

Main specifications of the product

Model name: imageRUNNER ADVANCE DX 4835i Platen(For EU)

Specifications

- Multi Functional Printer (Electrophotography)
- Print Speed : Up to 35 ipm (A4)
- Duplex printing
- Weight: approx.59.70kg(Toner bottle not included)

Company Information

Canon Inc.
30-2, Shimomaruko 3-chome, Ohta-ku,
Tokvo 146-8501. Japan

Registration#	JR-AI-23004C
PCR number	PA-590000-AI-05
PCR name	Imaging input and/or output equipment
Publication date	2/10/23
Verification date	2/2/23
Verification method	System certification
Verification#	JV-AI-23004C
Expiration date	2/1/2028
PCR review was conducted by:	
Approval date	4/1/2022
PCR review panel chair	Masayuki Kanzaki Sustainable Management Promotion Organization
Third party verifier*	
	Hiroyuki Uchida

Independent verification of data & declaration in accordance with ISO/TS14067

internal external

*Auditor's name is stated if system certification has been performed.

Registration number : JR-AI-23004C

1. Quantification results, and contents of the declaration

CFP quantification unit :

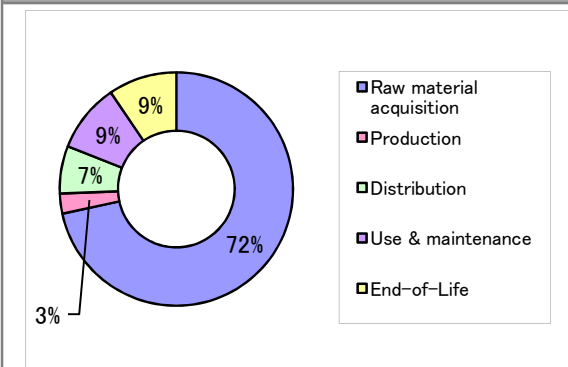

Parameter			Unit
CFP Quantification results		880	kg-CO₂eq
Breakdown	Raw material acquisition	630	kg-CO ₂ eq
	Production	24	kg-CO ₂ eq
	Distribution	58	kg-CO ₂ eq
	Use & maintenance	84	kg-CO ₂ eq
	End-of-Life	83	kg-CO ₂ eq
Value on CFP mark		880	kg-CO₂eq
Unit for the value on CFP mark		Per unit product	

*Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

3. Supplementary environmental information

- Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.
- Manufactured at ISO 14001 certified factories.

2. Additional information

Calculated in the following conditions;

- Printing paper is not considered.
- The standard scenario for Multifunction Device (EP type).
- UK / France / Germany / Italy / Spain / Portugal / Belgium / Netherland / Austria / Switzerland / Denmark / Sweden / Norway / Finland market.
- Print volume: 182,400 sheets.
- The applied Energy Star program version is 3.0.

4. Interpretation

- CO₂ emission in Raw material acquisition is the largest as 72%. It is important to reduce the size and weight, and to use low environmental impact materials.
- CO₂ emission in Use & maintenance is the second largest as 9%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO₂ emission during Use & maintenance stage.
- We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

5. Assumptions of secondary data used

IDEA v2.1.3, and registered data of SuMPO Environmental Labeling Program, JLCA data v1.13 are used.

6. Remarks

-

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied.
(Reference URL : <https://ecoleaf-label.jp/regulation/>)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
