Main specifications of the product

Model name

imageRUNNER ADVANCE DX 8905i(For US)

Specifications

- Multi Functional Printer (Electrophotography)
- · BW
- · Print Speed: Up to 105 ipm (LTR) · Max paper size: 330 × 483mm
- Print/copy/scan/Duplex printing/ADF
- Weight: approx.211.5kg(Toner bottle not included)

1. Quantification results, and contents of the declaration CFP quantification unit :

	Parameter		Unit
CF	P Quantification results	4800	kg-CO₂eq
	Raw material acquisition	1500	kg-CO₂eq
MO	Production	180	kg-CO₂eq
kd	Distribution	130	kg-CO₂eq
Breakdown	Use & maintenance	2800	kg-CO₂eq
	End-of-Life	230	kg-CO₂eq
١	/alue on CFP mark	4800	kg-CO₂eq
Unit f	or the value on CFP mark	Per unit product	

^{*}Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

3. Supplementary environmental information

- Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.
- Manufactured at ISO 14001 certified factories.

2. Additional information

Calculated in the following conditions;

- · Printing paper is not considered.
- The standard scenario for Multifunction Device (EP type).
- · US market.
- · Print volume: 6,604,800 sheets.
- The applied Energy Star program version is 3.0 Professional. Print volume is calculated by number of images described in the Appendix D.

4. Interpretation

- CO2 emission in Use & maintenance is the largest as 58%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during Use & maintenance stage.
- CO2 emission in Raw material acquisition is the second largest as 30%. It is important to reduce the size and weight, and to use low environmental impact materials.
- We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

5. Assumptions of secondary data used

IDEA v2.1.3, and registered data of Japan EPD Program by SuMPO, JLCA data v1.13 are used.

6. Remarks

-

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
