Raw Material acquisition, Production, Distribution, Verification method Product-by-product

Use & maintenance, and End-of-Life stage

# Main specifications of the product

Model name

imageCLASS LBP122dw(For US)

Specifications

- Printer (Electrophotography)
- BW
- Print Speed: Up to 30 ipm (LTR)
- · Max paper size : LGL
- Print/Duplex printing
- Weight: approx.6kg(Cartridge not included)

# 1. Quantification results, and contents of the declaration CFP quantification unit :

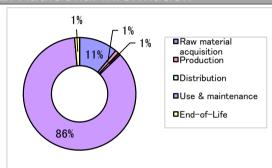

Parameter			Unit
<b>CFP Quantification results</b>		700	kg-CO₂eq
Breakdown	Raw material acquisition	78	kg-CO₂eq
	Production	7.1	kg-CO₂eq
	Distribution	4.9	kg-CO₂eq
	Use & maintenance	600	kg-CO₂eq
	End-of-Life	10	kg-CO₂eq
Value on CFP mark		700	kg-CO₂eq
Unit for the value on CFP mark		Per unit product	

<sup>\*</sup>Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

### 3. Supplementary environmental information

- Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.
- Manufactured at ISO 14001 certified factories.

### 2. Additional information

Calculated in the following conditions;

- · Printing paper is not considered.
- The standard scenario for Printer (EP type).
- · US market.
- · Print volume: 135,000 sheets.
- The applied Energy Star program version is 3.0.

### 4. Interpretation

- CO2 emission in Use & maintenance is the largest as 86%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO2 emission during Use & maintenance stage.
- CO2 emission in Raw material acquisition is the second largest as 11%. It is important to reduce the size and weight, and to use low environmental impact materials.
- · We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

### 5. Assumptions of secondary data used

IDEA v2.1.3, and registered data v1.13 of Japan EPD Program by SuMPO are used.

# 6. Remarks

-

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
