Canon Inc.

imageRUNNER ADVANCE DX C478i(For EU)

Functional unit	Registration#	JR-AI-23531C
Per unit product	PCR number	PA-590000-AI-08
	PCR name	Imaging input and/or output equipment
System boundary	Publication date	1/10/2024
■ final products □intermediate products	Verification date	12/28/2023
Raw Material acquisition, Production, Distribution,	Verification method	Product-by-product
Use & maintenance, and End-of-Life stage	Verification#	JV-AI-23531
Main specifications of the product	Expiration date	12/27/2028
Model name	PCR review was conducted by:	
imageRUNNER ADVANCE DX C478i(For EU)	Approval date	9/1/2023
Specifications • Multi Functional Printer (Electrophotography) • CL • Print Speed : Up to 47 ipm (A4) • Max paper size : LGL • Print/copy/scan/Duplex printing/ADF • Weight: approx.42.0kg(CRG not included)	PCR review panel chair	Masayuki Kanzaki
		Sustainable Management Promotion Organization
	Third party verifier*	
		Kazuo Naito
	Independent verification of data & declaration in accordance with ISO/TS14067	
Company Information	□internal ■ external *Auditor's name is stated if system certification has been performed.	
Canon Inc. 30-2, Shimomaruko 3-chome, Ohta-ku, Tokyo 146-8501, Japan		
+81-3-3758-2111		

Registration number : JR-AI-23531C

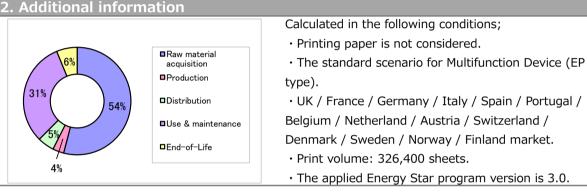

Carbon Footprint of Products CFP Declaration

Registration number : JR-AI-23531C

1. Quantification results, and contents of the declaration CFP quantification unit : Parameter Unit kg-CO₂eq **CFP** Quantification results 1000 550 kg-CO₂eg Raw material acquisition Breakdown 34 kg-CO₂eq Production 51 kg-CO₂eq Distribution 320 Use & maintenance kg-CO₂eq End-of-Life 63 kg-CO₂eq Value on CFP mark 1000 kg-CO₂eq Unit for the value on CFP mark Per unit product

*Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

2 Additional informa

4. Interpretation

 \cdot CO₂ emission in Raw material acquisition is the largest as 54%. It is important to reduce the size and weight, and to use low environmental impact materials.

• CO₂ emission in Use & maintenance is the second largest as 31%. It is important to save energy during product usage, to make the life time of consumables(e.g. CRG) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO₂ emission during Use & maintenance stage.

• We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

5. Assumptions of secondary data used

IDEA v2.1.3, and registered data v1.13 of Japan EPD Program by SuMPO are used.

6. Remarks

-

- For data quantification, please refer to PCR and Rules on quantification and declaration.

- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.

3. Supplementary environmental information

• Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.

• Manufactured at ISO 14001 certified factories.
