CITIZEN WATCH CO.,LTD

CITIZEN L(EM112*-6)

EM1123-62X

Functional unit

1 product

System boundary

final products intermediate products

Raw material acquisition stage Use & maintenance stage

Production stage Distribution stage End-of-Life stage

Main specifications of the product

Type: EM1123-62X

- Watch case material: Stainless steel
- Band material:stainless steel/synthetic leather • Watch glass: Sapphire glass
- Photovoltaic power generation driven for about 6 months when fully charged
- Accuracy: Monthly difference ± 15 seconds
- Waterproof: Waterproof performance for daily life
- Weight: 83.4 g (Includes 2 types of bands)

1. Quantification results, and contents of the declaration

CFP quantification unit :

Parameter			Unit
CFP Quantification results		8.2	kg-CO₂eq
Breakdown	Raw material acquisition	7.8	kg-CO ₂ eq
	Production	0.18	kg-CO ₂ eq
	Distribution	0.095	kg-CO ₂ eq
	Use & maintenance	0.0	kg-CO ₂ eq
	End-of-Life	0.12	kg-CO ₂ eq
Value on CFP mark		8.2	kg-CO₂eq
Unit for the value on CFP mark		1 product	

*Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

3. Supplementary environmental information

The assembly and main parts of this product are produced in an ISO14001 certified factory.

2. Additional information

4. Interpretation

- Destination: Japan
- At about 95%, the load at the raw material acquisition stage is very high. This is due to the use of stainless steel materials for the main body parts and the heavy load associated with processing them, so it is important to reduce CO2 emissions by using recycled materials and improve processing methods.
- The figures at the distribution stage are low because each wristwatch is light and not bulky, and can be transported in large quantities by truck or other means at once.
- Since this product is equipped with a solar cell, there is no need to replace the battery during use and maintenance. Furthermore, even if the synthetic leather band deteriorates, it can be replaced with a stainless steel band that does not require replacement, so the calculation result will be 0% at the usage and maintenance stage.
- When calculating the CFP, we use in-house data for the quantities of raw materials used. Collecting data for many of the components is, however, difficult. For that reason, the data for raw material generation is based on typical values for our processes. As a result, the data sometimes does not reflect the characteristics of this specific product. Kindly understand that, for the above reasons, these results are estimates.

5. Assumptions of secondary data used

IDEA v2.1.3, program registration basic unit 1.13 was used.

6. Remarks

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied.
(Reference URL : <https://ecoleaf-label.jp/regulation/>)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
