### Additional information

- ①Each LCI figure includes allocation for scrap recycling as a optional supplementary information[D].The recycling effect is calculated with the following totals.One is load accompanied with the scrap injection to the product production site.It is the credit accompanied with the scrap collection of the used steel product one more.Recycling rate(RR) of this EPD is 93%(the average of Japan in 2018).
- ②Transport to site scienario is based on PCR.
- ③The first data was acquired from 2023.
- ④The source of the unit power consumption is the average of 10 electric power suppliers of Japan in 2018.
- ⑤A component about the material and a substance mentioned the number quoted from our safe data seat (SDS).

### About the Climate Declaration

This declaration is based on the results of LCA calculations conducted to prepare an EPD in accordance with ISO 14025, and only the global warming impact (carbon footprint) has been isolated and disclosed. Indicators other than carbon footprint may be of equal or greater importance to the impact on global warming, and therefore great care must be taken in the interpretation and communication of this declaration. This figure is a portion of the verified data, and the declaration itself has not been verified by Japan EPD Program by SuMPO. Please check the QR on the right for EPD compliant with ISO14025.
