5. Additional explanation

■ [A3] Manufacturing

- 1) Each LCI includes allocation for scrap recycling as an optional supplementary information <code>[D]</code> at table.1 . Recycling rate (RR) used in this calculation is 93.0% (calculated based on ISO 20915/JIS Q20915 and using Japan data in 2018 from Japan Iron and Steel Federation and Japan Steel Can Recycling Association).
- 2) Scenarios of transport to site follow the PCR.
- 3) Each item (except iron) in table 3 is the maximum value of all product standards covered by this EPD. However, the iron content in each product is never less than 96.0%, and the contents of other components are adjusted.
- 4) Primary data collected in 2021. The source of the unit power consumption is the average of 10 electric power suppliers of Japan in 2014.

6-1. Supplementary environmental information

Each production site is certified to ISO 14001. (Certification Number E729)

| 6-2. Regulated hazardous substances | | |
|-------------------------------------|-----------|---------------------------------------|
| Substance | CAS No. | Reference to standards or regulations |
| manganese [Mn] | 7439-96-5 | Industrial Safety and Health Act |

7. Assumptions of secondary data used

We use the IDEA v2.1.3 data and steel scrap data(JP-AJ-0001) from the Japan Iron and Steel Federation.
