Non-hazardous waste.	1.5E+02	kg		

5. Additional explanation

- 1) Each LCI includes allocation for scrap recycling as an optional supplementary information <code>[D]</code> at table.1 . Recycling rate (RR) used in this calculation is 93.0% (calculated based on ISO 20915/JIS Q20915 and using Japan data in 2018 from Japan Iron and Steel Federation and Japan Steel Can Recycling Association).
- 2) Scenarios of transport to site follow the PCR.
- 3) Each item (except iron) in table 3 is the maximum value of all product standards covered by this EPD. However, the iron content in each product is never less than 96.0%, and the contents of other components are adjusted.
- 4) Primary data collected in 2021. The source of the unit power consumption is the average of 10 electric power suppliers of Japan in 2014.
