5. Additional explanation

- ① Each LCI figure includes allocation for scrap recycling as a optional supplementary information[D]. The recycling effect is calculated with the following totals. One is load accompanied with the scrap injection to the product production site. It is the credit accompanied with the scrap collection of the used steel product one more. Recycling rate (RR) of this EPD is 93% (the average of Japan in 2018).
- ② Transport to site scenario is based on PCR.
- ③ The first data was acquired from 2023.
- ④ The source of the unit power consumption is the average of 10 electric power suppliers of Japan in 2018.
- ⑤ A component about the material and a substance mentioned the number quoted from our safe data sheet (SDS).

6-1. Supplementary environmental information

Manufactured at ISO 14001 certified factories.

Manufactured at medical waste disposal certified factories.

6-2. Regulated hazardous substances

Substance	CAS No.	Reference to standards or regulations
Manganese [Mn]	7439-96-5	Industrial Safety and Health Act
Molybdenum [Mo]	7439-98-7	Industrial Safety and Health Act
Chrome [Cr]	7440-47-3	Industrial Safety and Health Act
Nickel [Ni]	7440-02-0	Industrial Safety and Health Act

7. Assumptions of secondary data used

We use the IDEA3.1.0 data and scrap iron data from the Japan Iron and Steel Federation (J.I.S.F).
