Hazardous waste	0.0E+00	kg			
Non-hazardous waste.	-1.5E+01	kg			
Treated MSW for landfill	2.4E-10	kg			
Treated industrial waste for landfill	-1.5E+01	kg			
*Data derived from LCA and not assigned to the impact categories of LCIA					

5. Additional explanation

(1) As an indirect impact, the recycling effect of steel materials based on JISQ20915 was evaluated and the values are listed in Table [D] above. The recycling effect was calculated as the difference between the load associated with the amount of scrap input to the product production site and the load reduction associated with the collection of scrap from used steel products. The recycling rate used in the calculation was 93.7% (according to JISQ20915, domestic data for FY2022 (source: Japan Iron and Steel Federation, Steel Can Recycling Association).

②For electricity intensity, "Electricity, Japan average, FY 2018" was used.

③Primary data was obtained in FY2023.

④Components related to materials and substances are the maximum of the respective upper limits of the applicable steel standards, except for iron.

⑤Electric furnace slag and mill scale are sold to the outside as products.

6-1. Supplementary environmental information

6-2. Regulated hazardous substances					
Substance	CAS No.	Reference to standards or regulations			
Manganese [Mn]	7439-96-5	Industrial Safety and Health Act			
Copper [Cu]	7440-50-8	Industrial Safety and Health Act			
Chrome [Cr]	7440-47-3	Industrial Safety and Health Act			
Nickel [Ni]	7440-02-0	Industrial Safety and Health Act			

## 7. Assumptions of secondary data used

We use the IDEA ver.3.1.0 data and steel scrap data(JP-AJ-0001) from the Japan Iron and Steel Federation are used.
