5. Additional explanation

① As an indirect effect, the recycling effect of steel materials based on JIS Q 20915 was evaluated, and in this declaration, the value is described in the indirect effect column of the life cycle impact evaluation result breakdown table.
The indirect effect is added to the total value in Tables A1 and A2 above.
The recycling rate used in the calculation is 93.0% (calculation is based on JISQ20915, domestic data for FY2018 (Source: Japan Iron and Steel Federation, Iron Source Association, Steel Can Recycling Association)

② The transport scenario followed PCR.

③ Regarding the constituents of materials and substances, except for iron, the maximum of each upper limit of the target steel material standard is shown.

④ For the primary data, the actual values for FY2018 were used. For the electric power intensity, "Electricity, average of 10 general electric power companies, FY2014" was used.

6-1. Supplementary environmental information

1.Muroran ,East Nippon and Kyushu Works are certified to ISO 14001.
2.We provide environment-friendly steel materials such as lead-free and steel materials that make it possible to reduce the weight of automobiles and omit manufacturing processes.
As a typical eco-products (environmentally friendly products), there is an OA shaft using lead-free free-cutting steel.

6-2. Regulated hazardous substances

Substance	CAS No.	Reference to standards or regulations
manganese [Mn]	7439-96-5	Industrial Safety and Health Act

7. Assumptions of secondary data used

We use the IDEA2.1.3 data and steel scrap data from The Japan Iron and Steel Federation (JISF).
