# 5. Additional explanation

•The indirect effect (scrap recycling potential) is calculated based on ISO 20915/JIS Q 20915 and shown as [D]Iindirect effect in table "1. Results of life cycle impact assessment (LCIA)" . The indirect effect is added to the total value (sum of [A1], [A2], [A3]) in tables. •Recycling ratio used in this calculation is 93.0% (calculated based on ISO 20915/JIS Q 20915 and using FY 2018 data from The Japan Iron and Steel Federatin, The Japan Steel Can recycling Association and The Japan ferrous raw materials association).

•The source of unit power consumption is the average of 10 electric power suppliers of Japan in 2014. •Primary data collected in 2018.

Each item (except iron) in the table "3. Material composition" is the maximum value of all product standards covered by this EPD.

# 6-1. Supplementary environmental information

The Products are manufactured in ISO14001 certified factories.

6-2. Regulated hazardous substances			
Substance	CAS No.	Reference to standards or regulations	
manganese [Mn]	7439-96-5		
		<ul> <li>Act on the Assessment of Releases of Specified Chemical</li> </ul>	
nickel [Ni]	7440-02-0	Substances in the Environment and the Promotion of Management	
copper [Cu]	7440-50-8	Industrial Safety and Health Act.	

7. Assumptions of secondary data used IDEA v2.1.3 data are used. Steel scrap data (JP-AJ-0001) from the Japan Iron and Steel federation are used.

#### 8. Remarks

- For data quantification, please refer to PCR and Rules on quantification and declaration.

- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
