Grain-Oriented Electrical Steel Sheets

# NIPPON STEEL | NIPPON STEEL CORPORATION

## **Functional unit**

#### 1 t

## System boundary

 $\Box$  final products

■ intermediate products

Production Stage and optional supplementary infomation

## Main specifications of the product

Production sites : Setouchi Works, Kyushu Works

Main standards : NIPPON STEEL Grade (ZH,ZDKH etc.) See Table 8.Remarks for details.

Type : Coil, Hoop, Sheet Main sizes (unit: mm, t: thickness) t=0.15~0.35

## 5. Additional explanation

1. Each LCI includes allocation for scrap recycling as an optional supplementary information(3) at table.1. Recycling rate (RR) used in this calculation is 93.0% (calculated based on ISO 20915/JIS Q20915 and using Japan data in 2018 from Japan Iron and Steel Federation and Japan Steel Can Recycling Association).

2. Scenarios of transport to site follow the PCR.

3. Each item (expect iron) in table 3 is the maximum value of all product standards covered by this EPD. However, the iron content in each product is never less than 90%, and the contents of other components are adjusted.

4. Primary data collected in 2018. The source of the unit power consumption is the average of 10 electric power suppliers of Japan in 2014.

5. For the transport of metallurgical coal, the amount is double counted due to the characteristics of the inventory database on which this estimation is based.
