Canon Inc.

imageRUNNER 1643P(For NZ)

Functional unit

Per unit product

System boundary

■ final products □intermediate products

Raw Material acquisition, Production, Distribution, Verification method Product-by-product

Use & maintenance, and End-of-Life stage

Main specifications of the product

Model name

imageRUNNER 1643P(For NZ)

Specifications

- Printer (Electrophotography)
- Print Speed: Up to 43 ipm (A4)
- Max paper size : Legal (LGL)
- Print/Duplex printing
- Weight: approx.11.5kg(Cartridge not included)

Company Information

30-2, Shimomaruko 3-chome, Ohta-ku, Tokyo 146-8501, Japan

+81-3-3758-2111

Registration#	JR-AI-23505C	
PCR number	PA-590000-AI-08	

PCR name Imaging input and/or output equipment

Publication date | 12/12/2023 Verification date 12/7/2023

Verification# JV-AI-23505

Expiration date 12/6/2028

PCR review was conducted by:

Approval date 9/1/2023

Masayuki Kanzaki PCR review panel chair Sustainable Management Promotion Organization

Third party verifier*

1. Quantification results, and contents of the declaration CFP quantification unit:

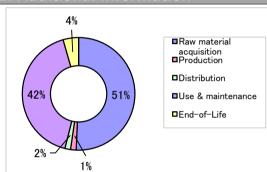

Parameter			Unit
CFP Quantification results		390	kg-CO₂eq
Breakdown	Raw material acquisition	200	kg-CO₂eq
	Production	6.2	kg-CO₂eq
	Distribution	6.3	kg-CO₂eq
	Use & maintenance	160	kg-CO₂eq
	End-of-Life	17	kg-CO₂eq
Value on CFP mark		390	kg-CO₂eq
Unit for the value on CFP mark		Per unit product	

^{*}Quantification results may slightly differ from the sum of the breakdown due to rounding of fractions.

3. Supplementary environmental information

- Complies with the EU RoHS Directive (2011/65/EU) and its amendments including 2015/863/EU.
- Manufactured at ISO 14001 certified factories.

2. Additional information

Calculated in the following conditions;

- · Printing paper is not considered.
- The standard scenario for Printer (EP type).
- · New Zealand market.
- · Print volume: 268,800 sheets.
- The applied Energy Star program version is 3.0.

4. Interpretation

- \cdot CO₂ emission in Raw material acquisition is the largest as 51%. It is important to reduce the size and weight, and to use low environmental impact materials.
- \cdot CO₂ emission in Use & maintenance is the second largest as 42%. It is important to save energy during product usage, to make the life time of consumables(e.g. drum) longer and to reduce amount of toner used when printing. The condition in this CFP evaluation can be different from the one which the user operates under. A choice of the use condition (print mode, print conditions and so on) can reduce the CO₂ emission during Use & maintenance stage.
- We evaluated the CFP with Canon's own data of raw materials weight and the general basic unit for the parts because it is difficult to collect the data for a couple of thousands of parts. Accordingly, the results may be different from the specific product specification.

As such, please be advised that this result would be a rough estimate.

5. Assumptions of secondary data used

IDEA v2.1.3, and registered data v1.13 of Japan EPD Program by SuMPO are used.

6. Remarks

-

- For data quantification, please refer to PCR and Rules on quantification and declaration.
- Comparative assertion is permitted only when Rules on quantification and declaration are satisfied. (Reference URL : https://ecoleaf-label.jp/regulation/)
- The CFP only addresses the single impact category of climate change and does not assess other potential social, economic and environmental impacts arising from the provision of a product.
